Safety Management Resource Repository

Implementation Planning Tool
Small Studies Program

1993 → 2019 - 2024

- Good practices
- Emerging issues
- New technologies
- Innovative directions
- High risk sectors and populations

Received 284 letters of intent and funded 119 studies
Projects Finishing Up... on the r2p road

2014 - 2019

- Safety Climate and Ergonomics
- Public Policy Intervention Impacts*
- Construction Solutions
- Concrete Drilling Methods*
- Contractor Safety Pre-Qualification Tool*
- Safety Voice for Ergonomics
Projects Getting Underway

2019 - 2024

- Improved OSHA 10
- Evaluation of Exoskeletons
- Prevention through Augmented Pre-Task Planning
- PtD Diffusion
- Evaluation of Best Built Plans
- Safety and Wellbeing for Women through Mentoring
- Leadership and Fall Prevention in Residential
Due to high injury and fatality rates, injuries from repetitive, strenuous work can lead to treatment or self-treatment. Precarious employment associated with increased odds of drug use.
Construction workers are the most likely to misuse prescription opioids

USA TODAY
November 5, 2019
HAZARD ALERT

OPIOID DEATHS IN CONSTRUCTION

Why are Construction Workers at Risk?

The construction industry has one of the highest injury rates compared to other industries. Opioids are often prescribed to treat the pain caused by these injuries.

Protect Yourself!

1. Prevent Injuries

Work shouldn’t hurt — your employer must provide a safe workplace to prevent an injury from occurring. A commitment to safety reduces the risk for injury and need for pain medication.
